

Iron and Sulfur problems?

Your Water, The Universal Solvent!

Water is considered the universal solvent. As it passes from liquid to vapor and back again, it tends to dissolve everything it touches - whether in the air as water vapor where it can mix with sulfur from smoke stacks forming acid or from the ground, absorbing calcium, magnesium, sulfur, iron, lead and limestone - water can have a negative impact on you, your household and your pocketbook. Depending on where you live, contaminants from sewage, industrial waste and agricultural run-off can also seep into your water supply.

Your Water May Have Iron and Sulfur.

If your water has the odor of rotten eggs, if there are iron stains on your sinks and bathtubs...if you use large amounts of soap to clean dishes, wash your hair or suffer the "orange hair" effect sometimes caused by iron water, you probably have water that can be successfully treated with an Ironbreaker III iron and sulfur removal system. If left untreated, the minerals will cause yellow/brown stains on fixtures and clothing, clogged pipes and appliances, shortened service lives for dishwashers, washing machines and water heaters, all adding to the cost of maintaining appliances while increasing the amount of energy consumed in your home.

Water softeners eliminate the effects of hard water; the Iron-breaker III eliminates iron and will remove sulfur's objectionable effects.

Whether it's rust stains in your sinks and laundry, or the smell of sulfur when you turn on a tap, your water problems can cause you and your family more than embarrassment and frustration. Iron and sulfur can damage your fixtures and plumbing, discolor your laundry or create unpleasant odors in drinking water and showers.

Soft water that is iron and odor free makes a big difference you can see, and feel, all over the home.

In the Bathroom: No more iron stains or rotten egg odor. Soap and shampoo will lather better. Hair and skin will feel noticeably cleaner. And when used with a water softener, your iron free, odor free water will be soap scum free, without mineral deposits to clean off sinks, showers, tubs and toilets.

In the Laundry: Without iron or sulfur in the water, clothes will be whiter and brighter. Plus, they will last longer. Add a water softener and increase the life of clothing, towels and linens by up to 33% and add even longer service life to your appliances.

In the Kitchen: No iron staining on the sink, no objectionable odor while running water for cooking, cleaning or drinking. Dishes will clean more easily and, by adding a water softening unit, your dishes will be spot free without the film glasses get when etched by mineral-laden water.

Throughout the House: Water using appliances will last longer and run better. Why? Because hot water heaters, washing machines and dishwashers using iron laden, hard water can wear out 30% faster, while consuming more energy than an appliance using iron free, sulfur free, soft water.
